DETAILED ACTION

Claim Rejections - 35 USC § 112

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hegg (4904049).

It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex Parte Masham*, 2 USPQ F.2d 1647 (1987).

Hegg teaches a fiber optic diffusion faceplate with improved structure, e.g., it is conventional for a fiber optic faceplate to be used as a diffusing plate/film for a light uniforming optical system. Furthermore, the "radiused" fibers of Hegg's invention provide the prismatic function (this prismatic function is inherent to Hegg's device) of focusing the light. (fig. 8). Thus, Hegg's fiber optic faceplate teaches each and every structural limitation in claim 1. Thus claim 1 is rejected.

Hegg teaches the faceplate comprises plurality of microscopically thin optical fibers. (col. 3 lines 5-7). Thus claim 2 is rejected.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mori (6803991) teaches wherein an optical fiber bundle or a diffusion plate is used as the light uniforming optical system.
